

objects/Mouse.php

Setting the global variable \$DEBUG above the class declaration will provide significant feedback above the webpage's Title Bar and a small amount of feedback in the Message Area below the Menu Bar. If \$DEBUG is set at a higher order (eg. std/page.php), the small amount of feedback in the Message Area will also be generated.

As an example:

```
ATTRIBUTE: seq= Array ( [isa] => int
Read/Writable? = 1
Initialize Value =
Attribute Object ( [key] => seq [vals] => Array [name] => [read_writable] => 1 [isa] => integer
[trigger] => [doc] => [type] => string [subtype] => Array
```

Verb is set? 1 (count)

Attribute exists? 0 (lms_audit)
