

Viewer Page Render Example

Using either Mouse Object constructor detailed above, a Message Viewer Page Class would look like:

```
class MessageViewer extends Page {  
    function __construct() {  
        parent::__construct("Message Viewer");  
        $this->data = new MessageDB();  
        $this->list = array();  
    }  
  
    function pre_render() {  
        parent::pre_render();  
        //handle deletes if a mission_id is presented  
        if ($_REQUEST['delete']) { $this->handle_delete(); }  
  
        $this->message = $this->data->read_lms_message();  
        if (empty($this->message)) { $this->addError("No message associated with this message ID."); }  
    }  
  
    function body() {  
        if (!empty($this->message)) {  
            $this->data->update_message_read_time();  
            $links = array(array(link => "default.php?appname=message-view&delete=1&message_id=" .  
                $this->data->get_message_id(), label => "Delete"));  
            auto_render_view($this->data, "" . $this->data->get_subject() . "", "600px", $links);  
        }  
    }  
  
    function handle_delete() {  
        $this->data->delete_lms_message();  
        my_redirect('default.php?appname=message-mgr');  
    }  
}
```

"Hi there"		[Delete]
